Emerson E&P Software Cloud Hosted Solution

The right tools and services to simplify your work on the cloud

Accelerating Digital Transformation of the Oil & Gas Industry with Cloud Hosted Software

The enormous growth in the volume and complexity of data, together with the need to reduce costs and enhance productivity in the Exploration and Production market, poses a growing challenge for today's managers. Emerson addresses this issue by delivering its entire E&P portfolio in the cloud, providing greater data analytics power and flexibility for some of the most challenging operational environments in the industry.

The Emerson cloud hosted solution is specifically attuned to the needs of the oil and gas E&P industry, without compromising the performance of our advanced science products and workflow integration. Together with its commitment to open standards and interoperability, access to the cloud is accelerating the digital transformation of the oil and gas industry.

Simply said, we offer the tools and services to make your cloud journey fast and easy.

More Options, Greater Flexibility

The Emerson cloud hosted option offers oil and gas companies maximum freedom in selecting their working and storage environment. Users can enjoy the same benefits from our software, whether running it locally, hosting it on the cloud, or using a hybrid of both. Faster, more powerful computing power connects critical subsurface intelligence with surface operations and optimizes collaboration between remote teams. IT Managers who choose the cloud use the flexibility and scalability of its infrastructure to easily provision, manage and monitor use, leading to optimal cost control.

The availability of the entire Emerson E&P software portfolio in the cloud provides users with access to fast and powerful applications that deliver critical subsurface intelligence and connect subsurface with surface operations.

Customizable to Your Needs

Select the most appropriate solution for your operating environment and requirements from two business options:

- Customer Hosted
  - Customer Managed – Run the software in your own cloud environment, managed by your IT organization.
  - Emerson Managed – Customers run the software in their own cloud environment, managed by the Emerson IT organization. This service aims at helping customers operate and manage the cloud infrastructure, leveraging Emerson's expertise in building and operating secure cloud solutions.
- Emerson SaaS – Emerson provides a service for hosting and managing the cloud platform for our customers, including IT operations and providing software licenses, support, maintenance and operation.

Emerson cloud-hosted software is available on Microsoft Azure and Amazon AWS.

How Emerson E&P Cloud Hosted Software Benefits You

- Continue to enjoy best-in-breed applications and workflows.
- Persona-based deployment for optimized performance at all levels of use.
- Provision, manage and monitor usage to control costs.
- No need to constantly update your hardware.
- Optimize collaboration between remote teams.
- Offload internal IT and remove implementation bottlenecks.
- Automated creation and maintenance of the environment with fit-for-purpose automation tools.
- Strong support for industry standards enables transition to and co-existence with next-generation cloud applications.

Let us take the pain out of your journey to the cloud.
